

ANTARES/KM3Net Collaboration meeting in Paris

## Data Technologies and Services from EGI, EMI and others

Patrick Fuhrmann, [dCache.org](http://dCache.org)

## IT Services offered by EGI

- Open Source Software Stack (UMD)
- Provides contact(s) to service and software providers (e.g. Globus, dCache, CERN DM)
- Provides IT consultancy
- IaaS: General compute and cloud service brokering. (fed-cloud infrastructure)
  - VM provisioning in production
  - Storage provisioning in beta-phase

## Advantages

- Professional Software release management
- Continues testing
  - For interoperability
  - “Staged rollout” at production sites
- Toolbox approach
  - Interfaces between the different components are all standard based.
  - No need to run the entire system
  - Pick as much or as little as you need
  - “Drop in” replacement for industry systems
  - No vendor lock-in

## Who are the software providers

- Software initially consolidated by EMI and migrated into the EGI “Unified Middleware Distribution”
- From 2010 – 2013, spending about 24 Million Euros
- Composed of 24 partners
- Consolidating the 4 major European Middle-wares
- One major goal: Using standard interfaces and protocols where ever possible
- Although EMI ended, the product team committed to continue development and support of their components.

The European Middleware Initiative (EMI) project represents a close collaboration of the major European middleware providers - ARC, gLite, UNICORE and dCache - to **establish a sustainable model to support, harmonise and evolve the grid middleware** for deployment in EGI, PRACE and other distributed e-Infrastructures

## What do we need in Storage

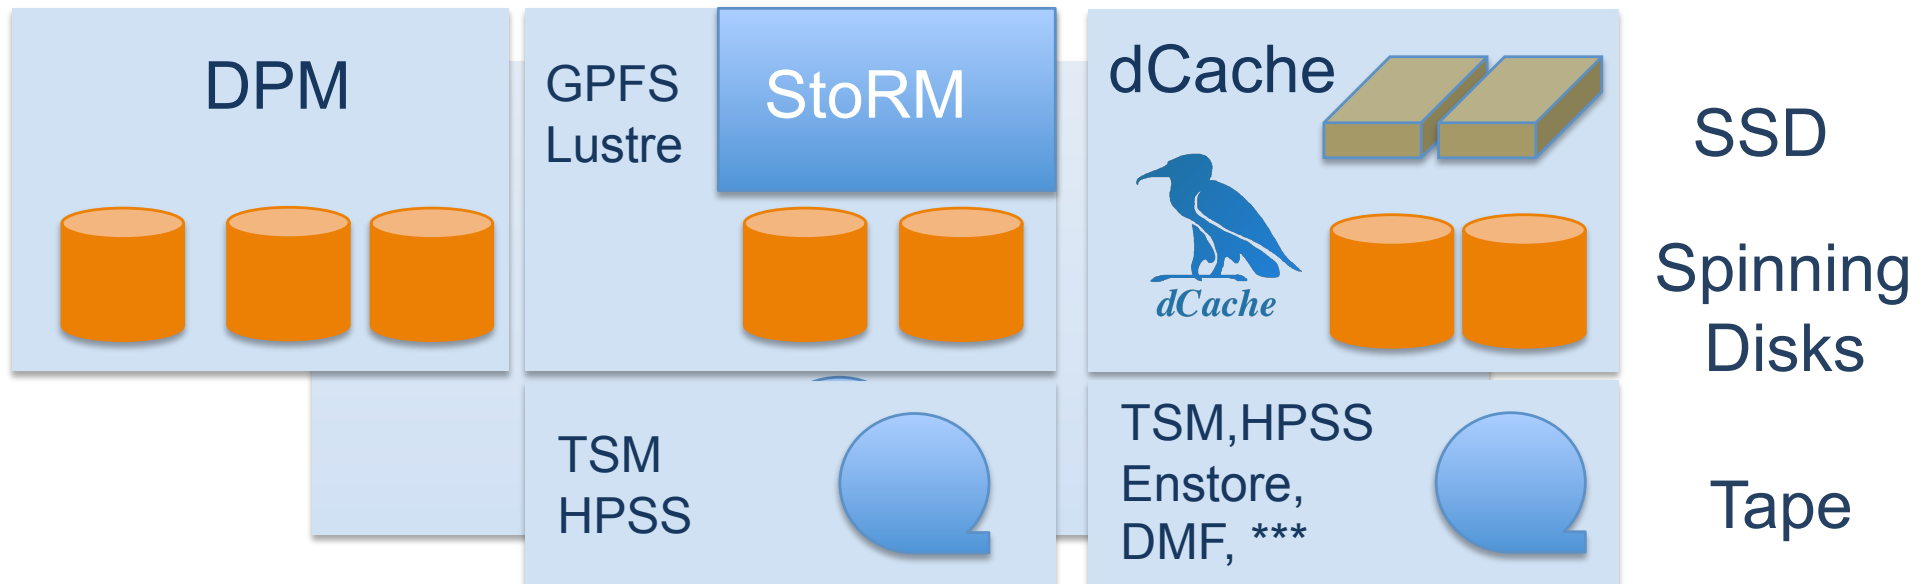

- Storage endpoints
- File transfer services
- Meta data and location catalogues
- Storage Access Federations
- All based on
  - GridFTP for wide area
  - NFS (4.1 / pNFS) for local access
  - Http/WebDAV for Web access
  - SRM/CDMI for storage management

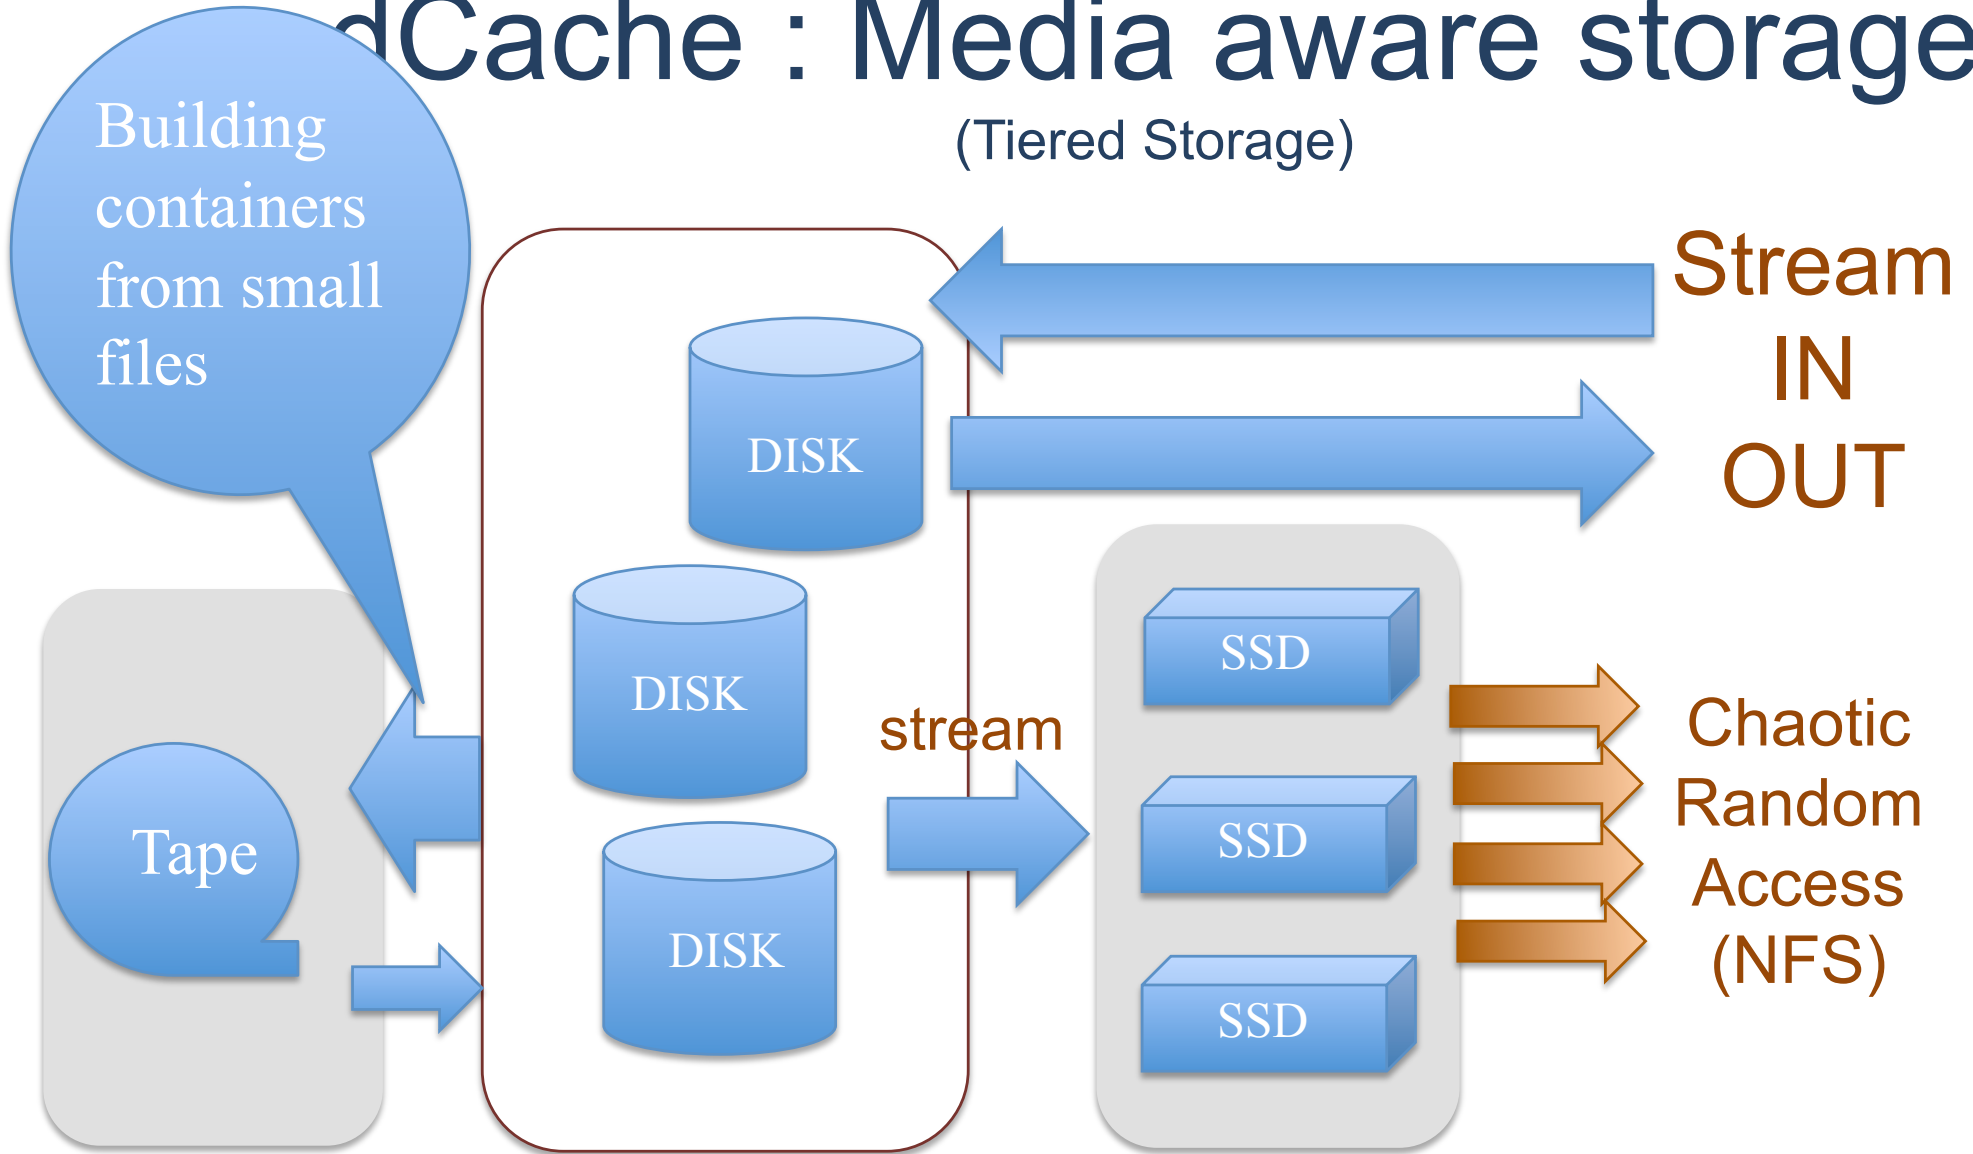

## The storage endpoints

Storage Management	Wide Area Access	High Performance Random Access	Accounting
SRM/CDMI	WebDAV    GridFTP	NFS 4.1 / pNFS	StAR

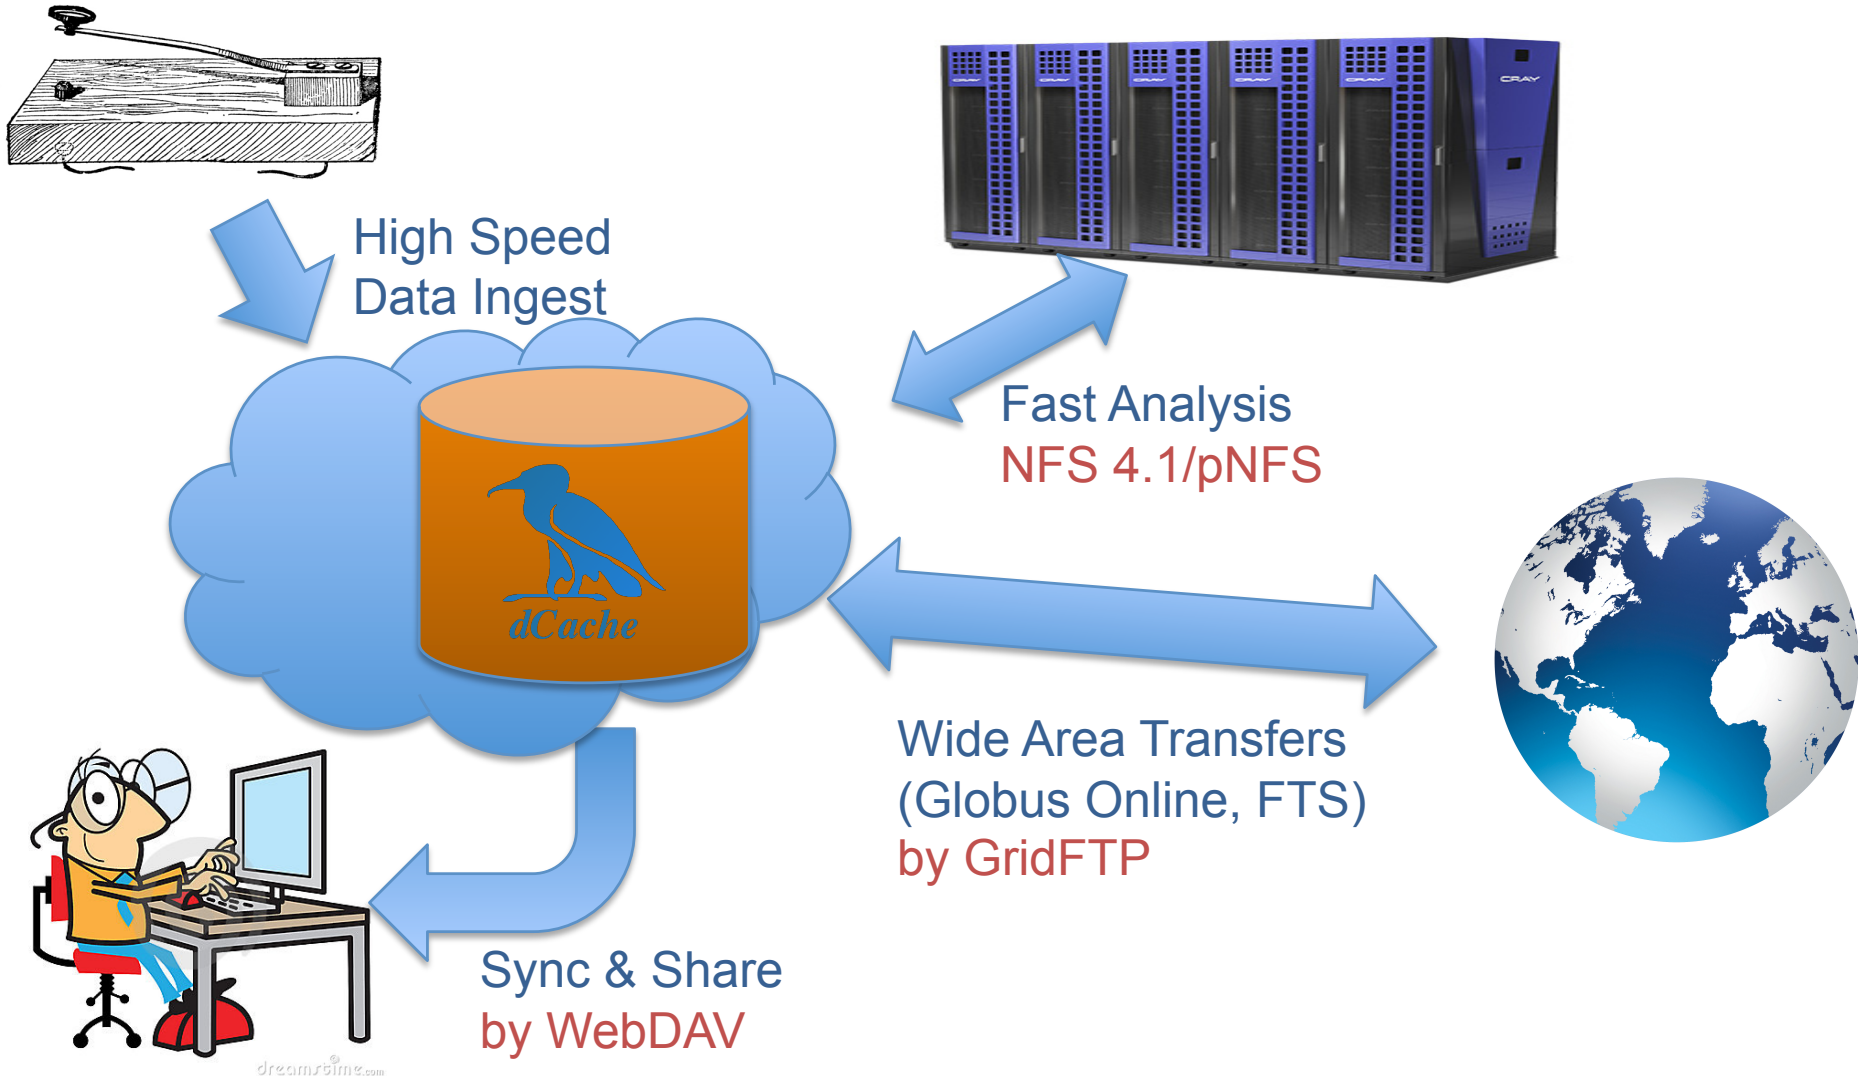

### Standard Abstraction Layer

## GridCache : Media aware storage (Tiered Storage)

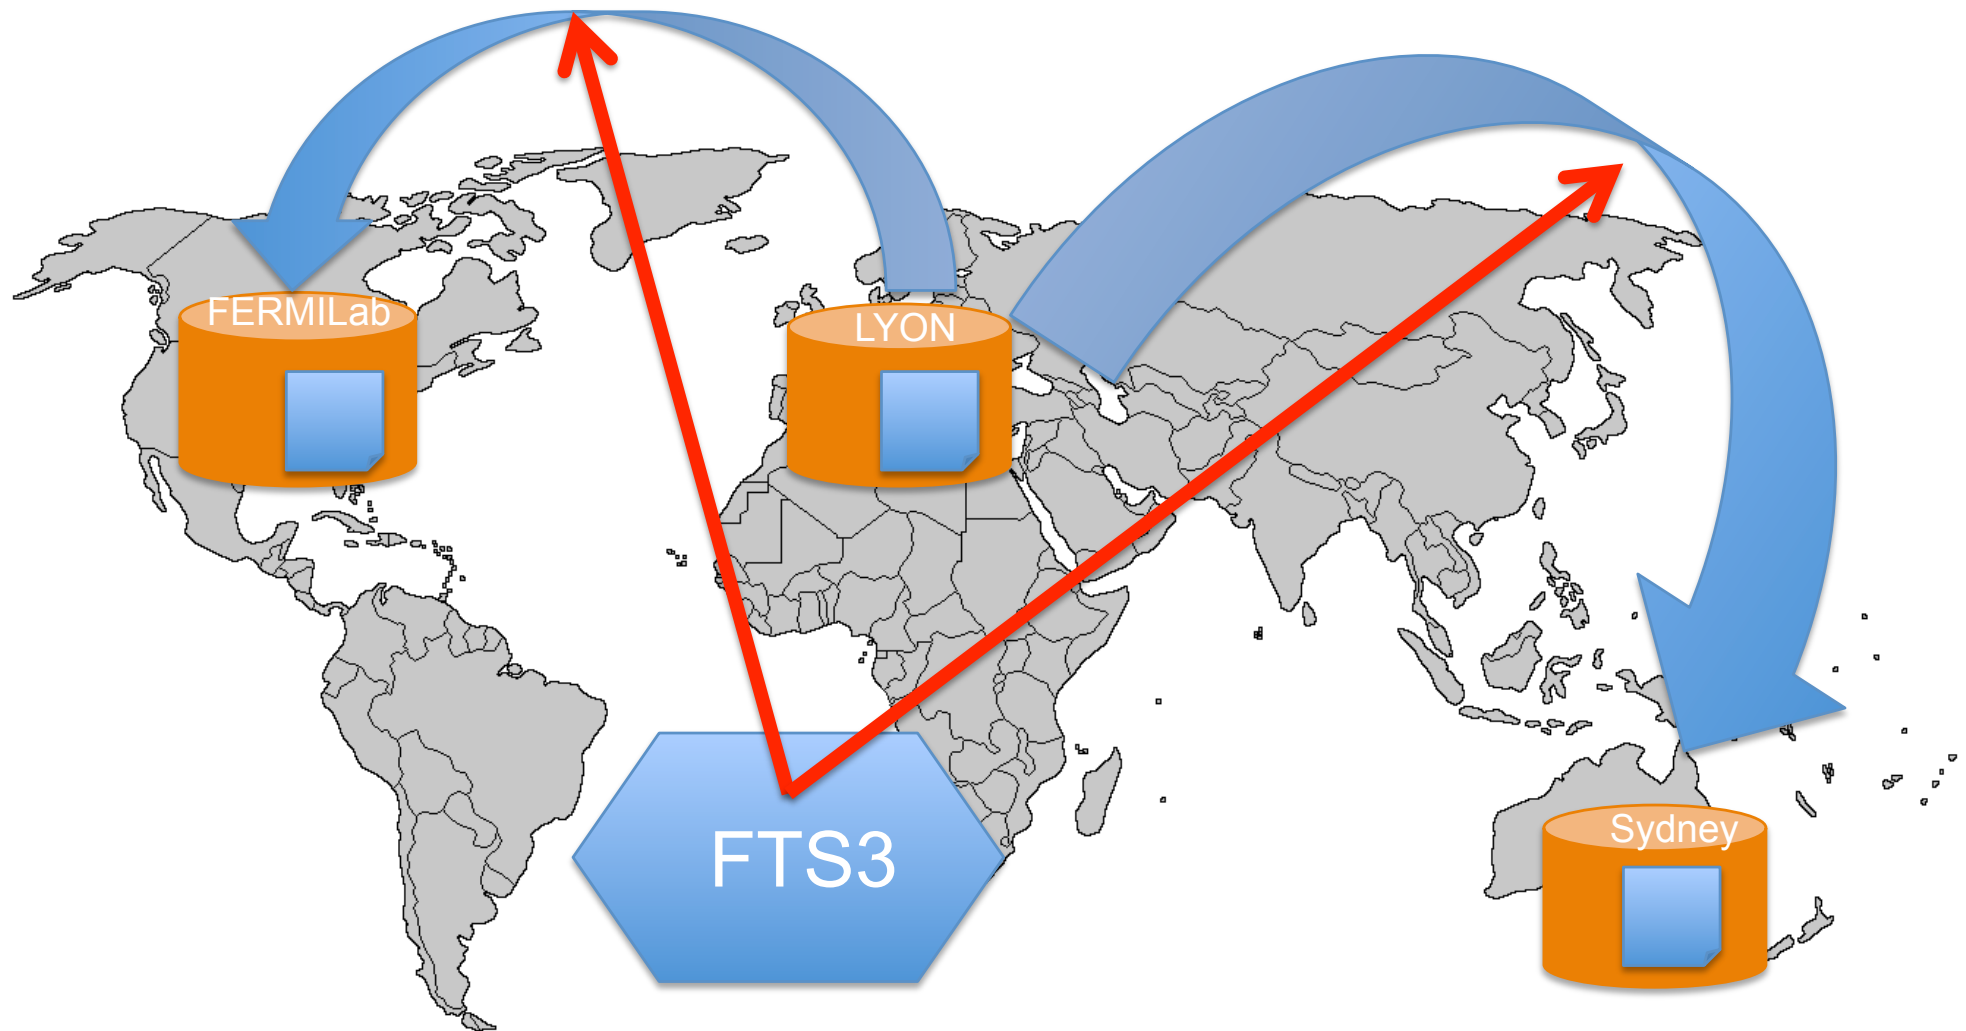

dCache support the entire scientific data life-cycle

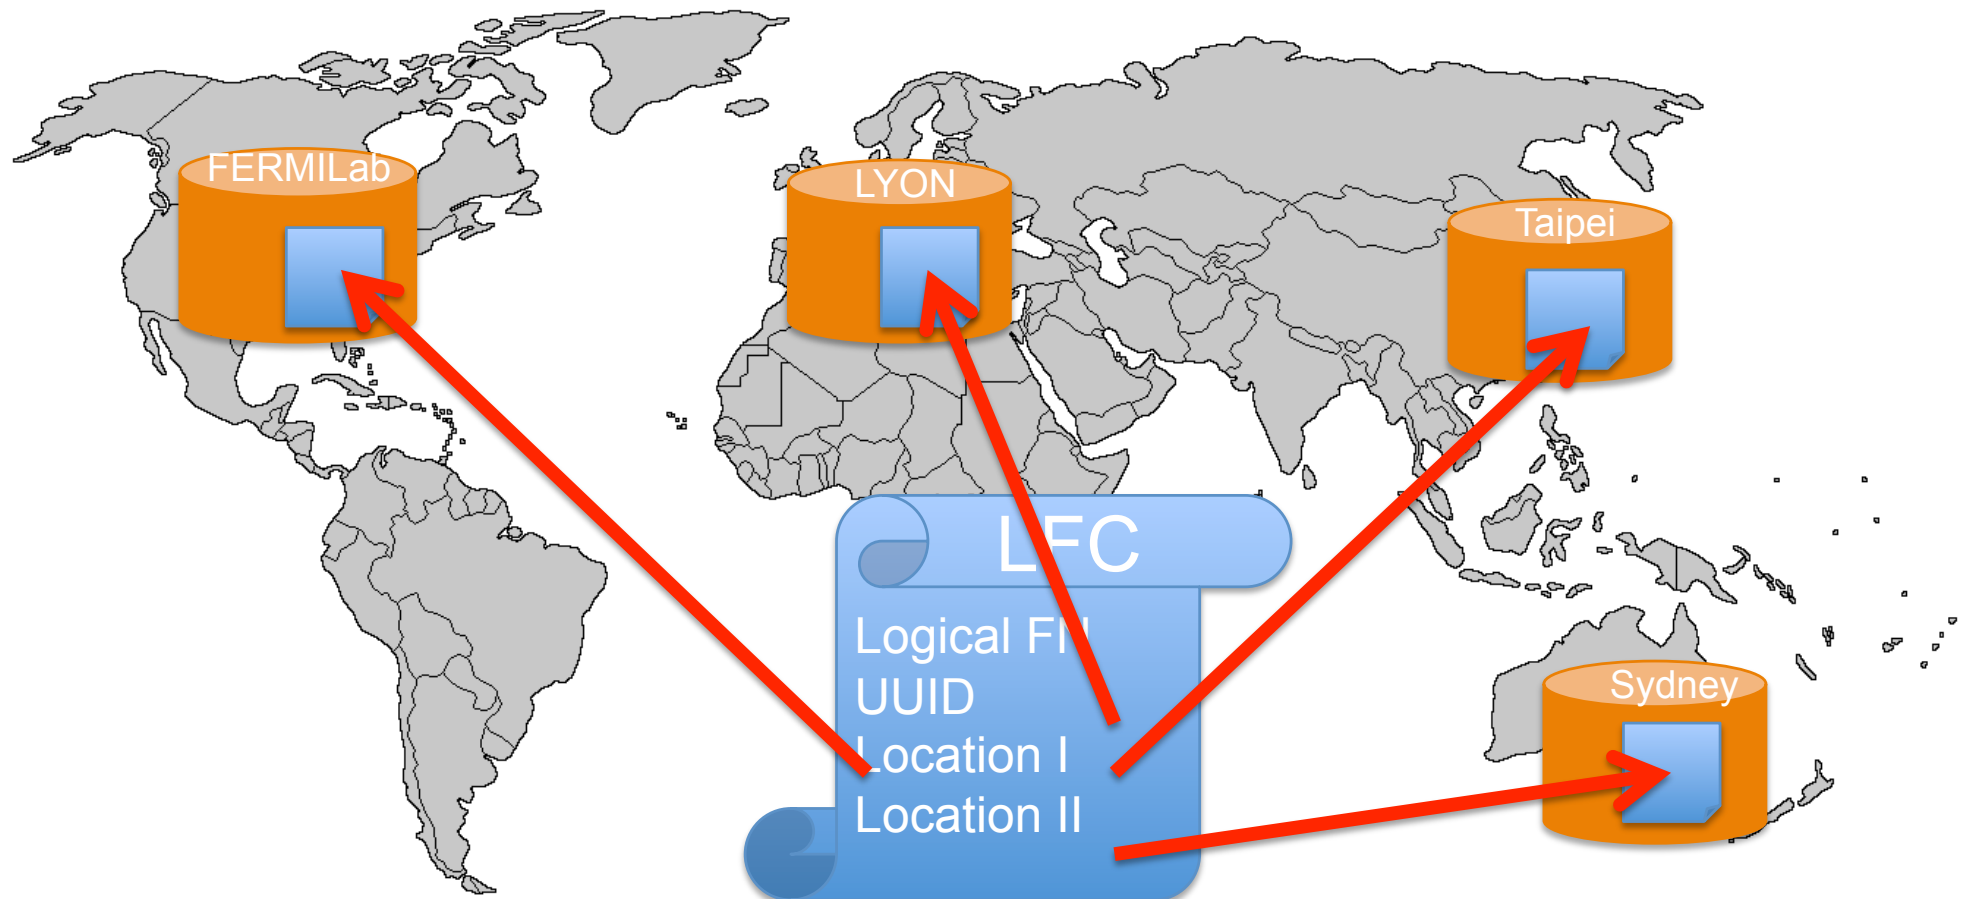

## File Transfer Service FTS3

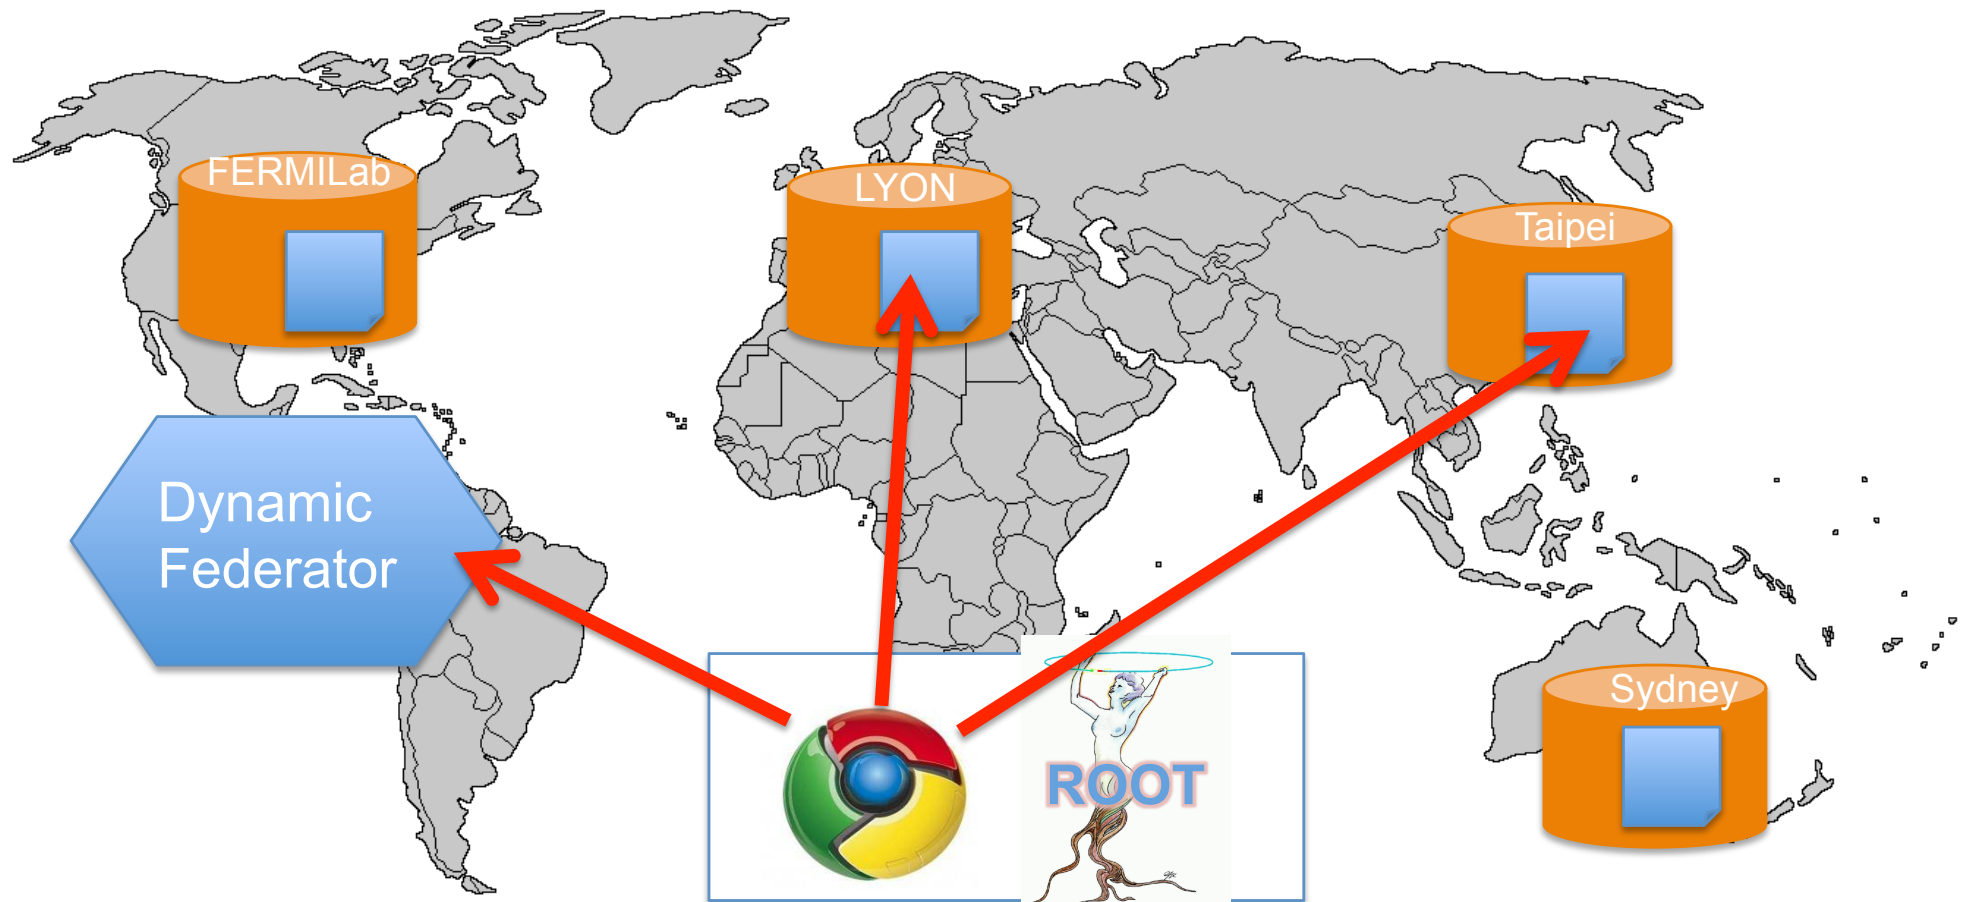

## Location and Metadata Catalogues (LFC)

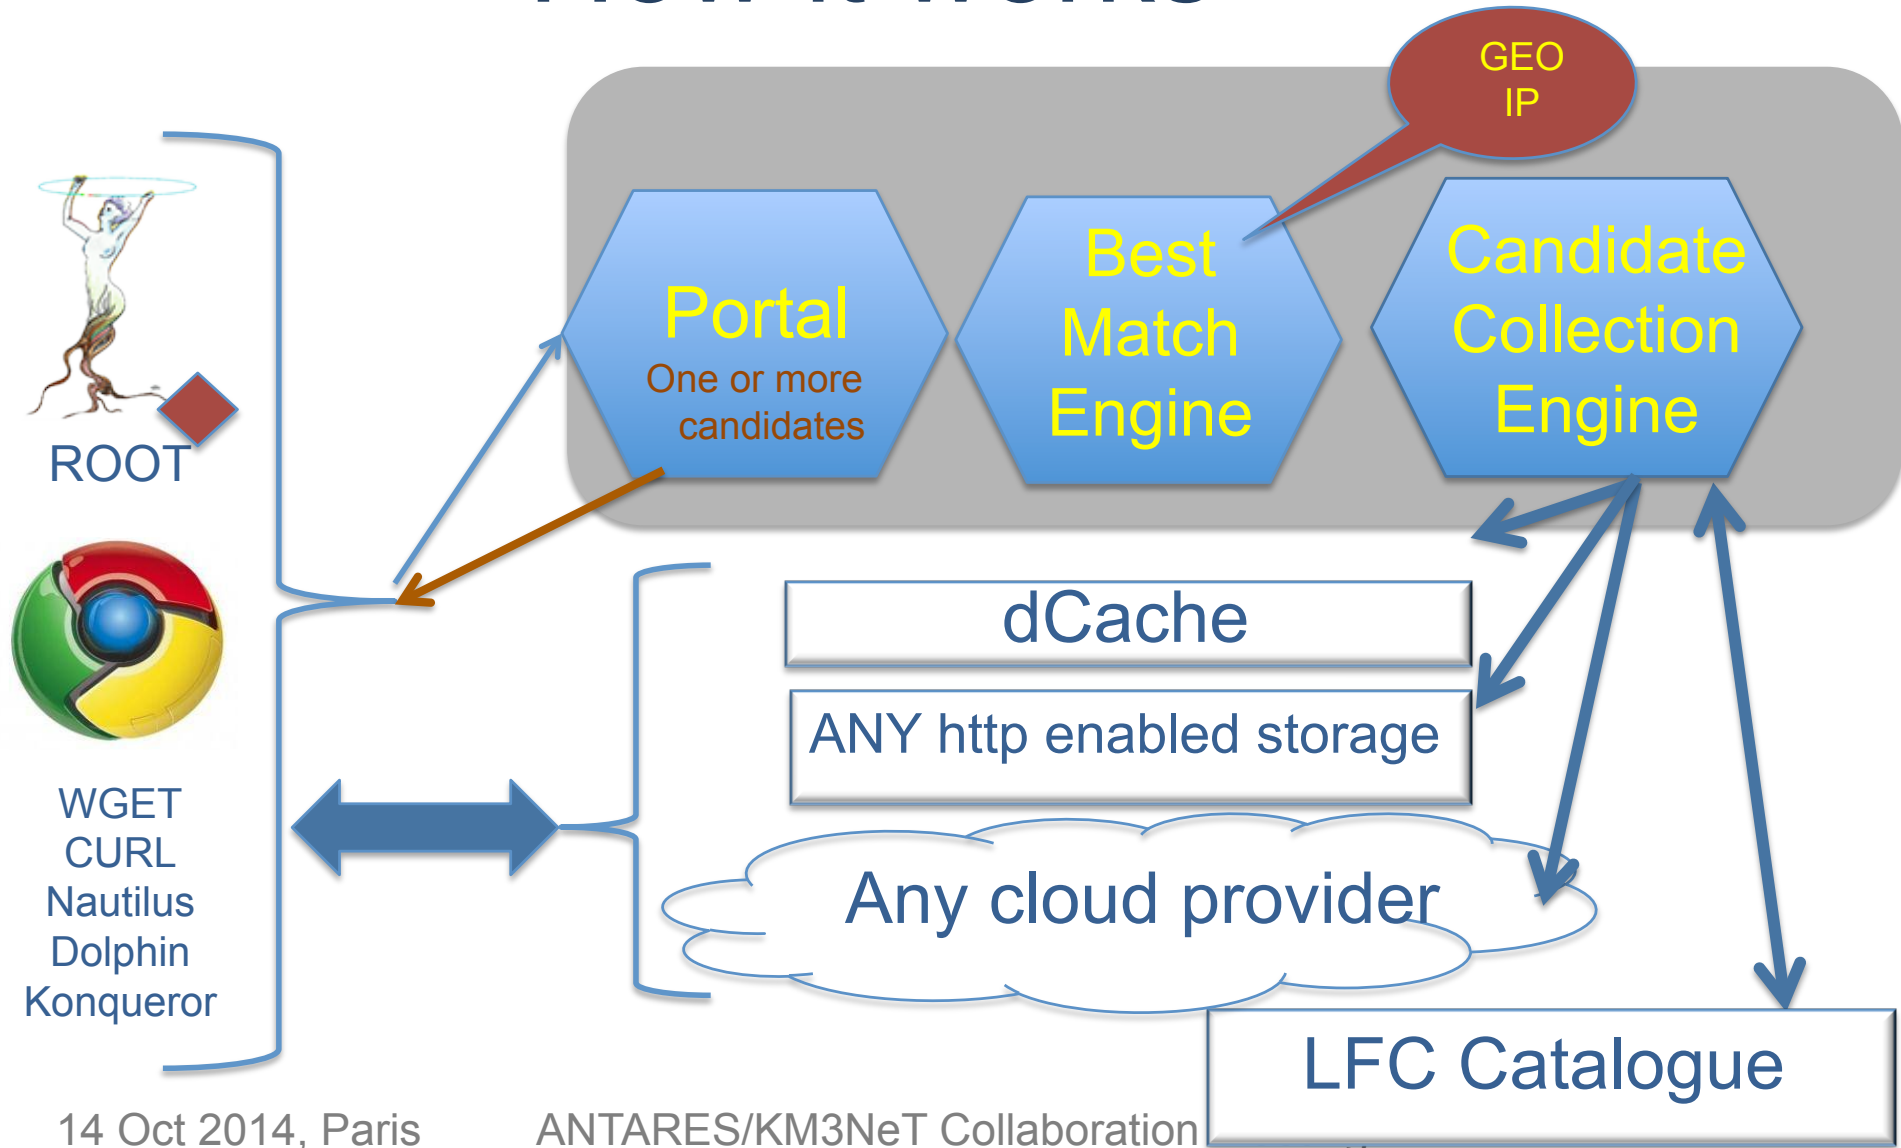

## Dynamic Federation

Based on [http/WebDAV](http://WebDAV)  
([federation.desy.de](http://federation.desy.de))

## How it works

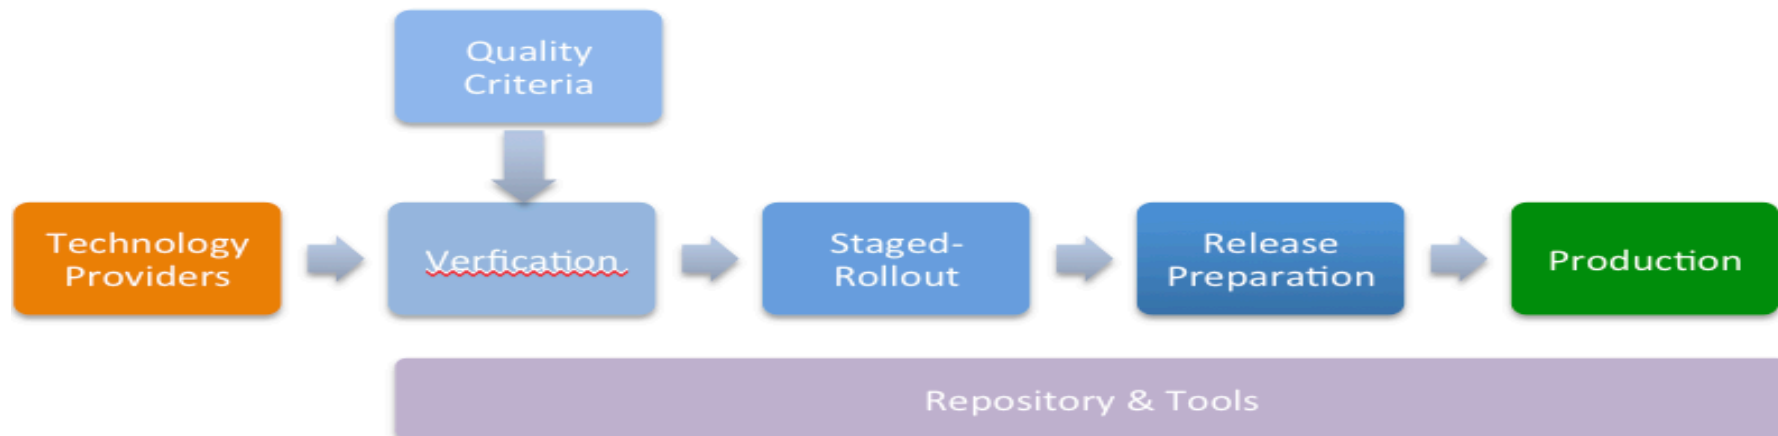

## The EGI UMD Release Management

## UMD By Cristina Aiftimiei

Data Management & Storage Services available in UMD and their support calendar

[https://wiki.egi.eu/wiki/URT:UMD\\_products\\_ID\\_cards](https://wiki.egi.eu/wiki/URT:UMD_products_ID_cards)

*“UMD stands for **Unified Middleware Distribution**, the proposed approach of handling middleware maintenance, integration, testing, and deployment within the EGI and NGI infrastructure. It defines components, processes, involved parties etc. in order to guarantee the infrastructure to get reliable middleware in terms of both functionality and quality.”*

## Software Provisioning – Staged Rollout

By Cristina Aiftimiei

- EGI Staged Rollout
  - procedure through which newly verified software releases are first deployed and tested by **Early Adopter sites** before General Availability to all sites in the production infrastructure.
- At the moment
  - 67 different products (79 components) from different PT's
  - 76 Early Adopters registered (29 most active)
    - <https://www.egi.eu/earlyAdopters/teams>
    - <https://www.egi.eu/earlyAdopters/table>
- Many teams are acting as EA for more than one product.

## Globus Transfer

(Stolen from Helmut Heller)

- GLOBUS Transfer is a service.
- It is not provided by EGI but by GLOBUS in the US.
  - That might or might not cause legal problems.
  - Not planned to have such a service in Europe.
- Compatible with EGI storage endpoints
- And good contacts
  - EGI -> EGCF -> GLOBUS (US)
  - dCache <-> GLOBUS

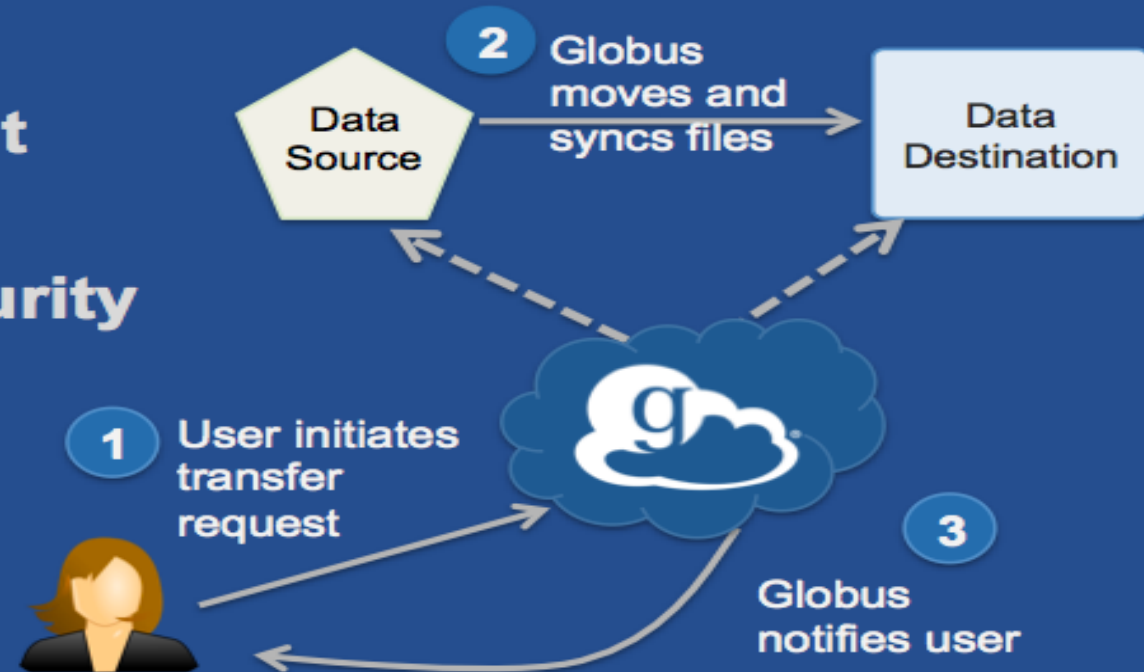

## GLOBUS Transfer

Reliable, secure, high-performance *file transfer and replication*

- “Fire-and-forget” transfers
- Automatic fault recovery
- Seamless security integration
- Powerful GUI and APIs

## Summary

- The EGI Storage UMD covers the entire data life cycle, from low level “Tiered Storage” to high level data transfers and data federations.
- EGI UMD provides standard interfaces for storage and storage management, allowing “Drop In” replacement of single components.
- EGI UMD provides professional release management and testing (Staged Rollout).
- EGI provides consultancy and contact to product teams.
